

SWG 2.3 Activities

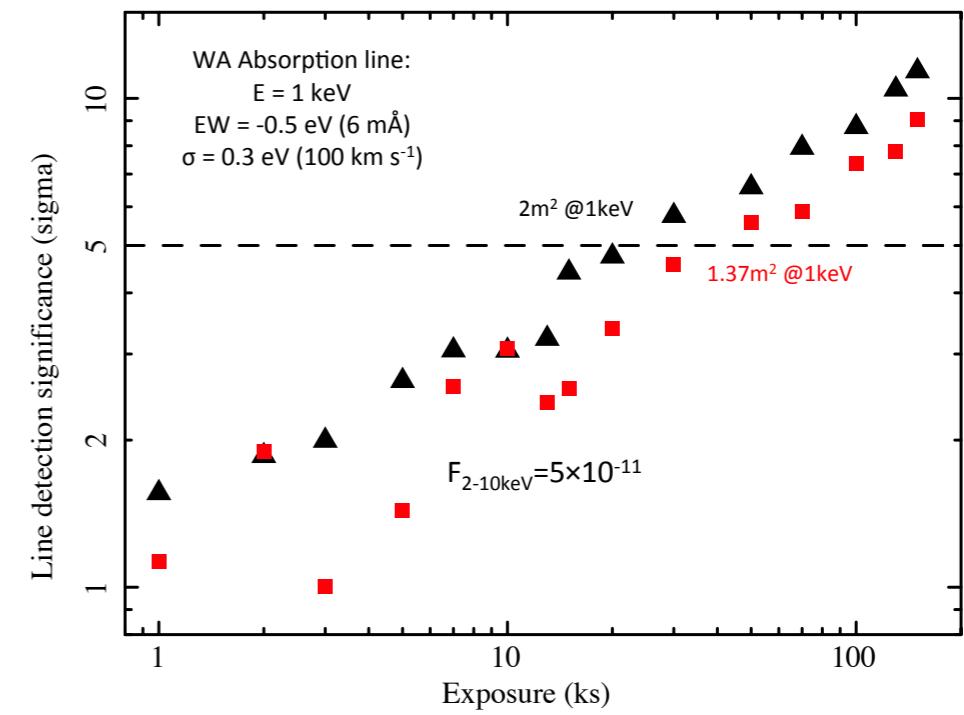

- Organized two telecons (with other co-Chairs)
 - April 8, 2015: Introduction to SWG and request for input for Athena Science Impact Exercise (ASIE)
 - September 21, 2015: Updated the SWG on the Madrid meeting, request for input for level 2a requirements
- Helped write and assess starburst targets for the SWG 2.3 input to ASIE report, determined starburst targets and exposure times for mock observing plan (MOP)
 - AGN feedback simulations were mostly done by Gabriele Ponti (co-chair of SWG 2.3), Francesco Tombesi (particularly UFO simulations), Mauro Dadina
- Attended Athena meetings in Bologna (Feb. 2015), Madrid (Sept 2015)
 - At Madrid meeting gave talk on starburst outflow science with Athena, attended end-to-end simulation group meeting prior to main meeting
 - working with end-to-end simulation group to use simulator (SIXTE) in complex case of point sources + diffuse emission in starburst galaxies
 - Remotely attended part of SWG chairs meeting at MPE, Nov. 2015
- Japanese co-Chair changed (Takeshi Tsuru -> Yuichi Terashima), at T. Tsuru's request
- Upcoming activity
 - More starburst simulation work to assess background, energy resolution calibration requirements
 - Simulation of extended AGN emission

AGN Outflow Simulations

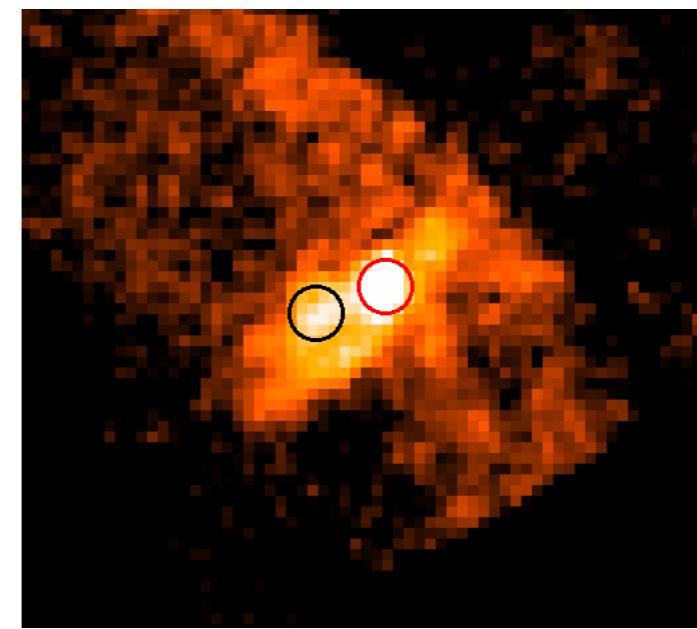

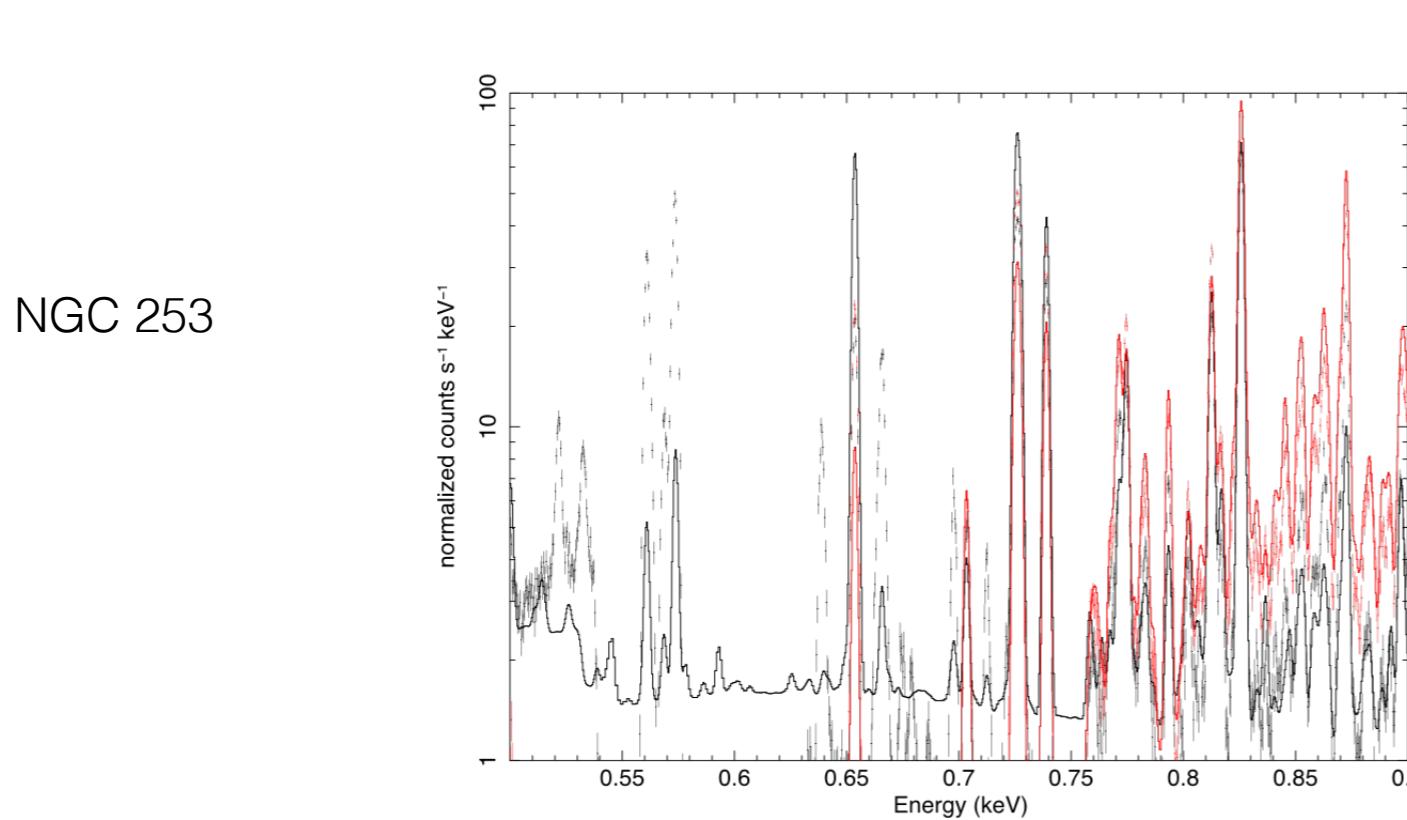

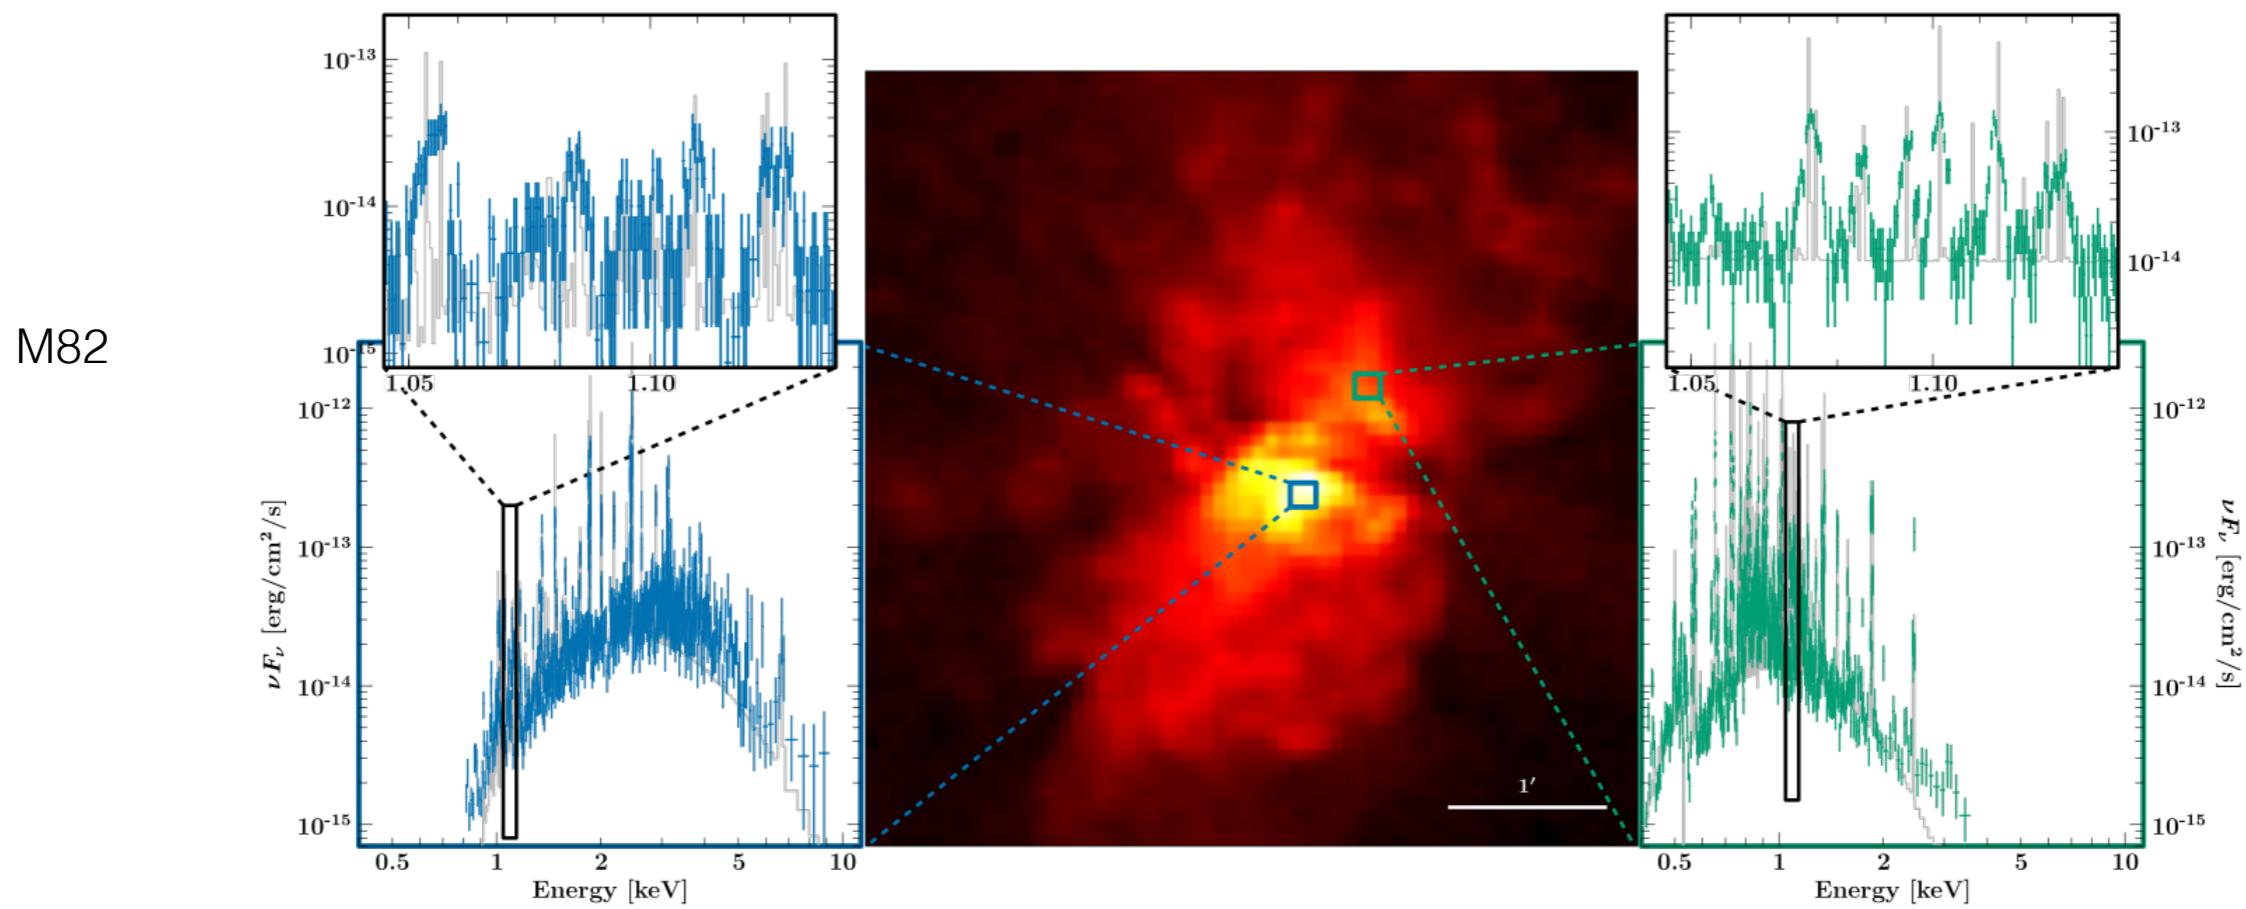

UFOs

Warm Absorbers

X-IFU Simulations of Starburst Galaxies
